

Energy and mining

EXPLORE. DISCOVER. PROSPER.

South Australia's ecosystem.

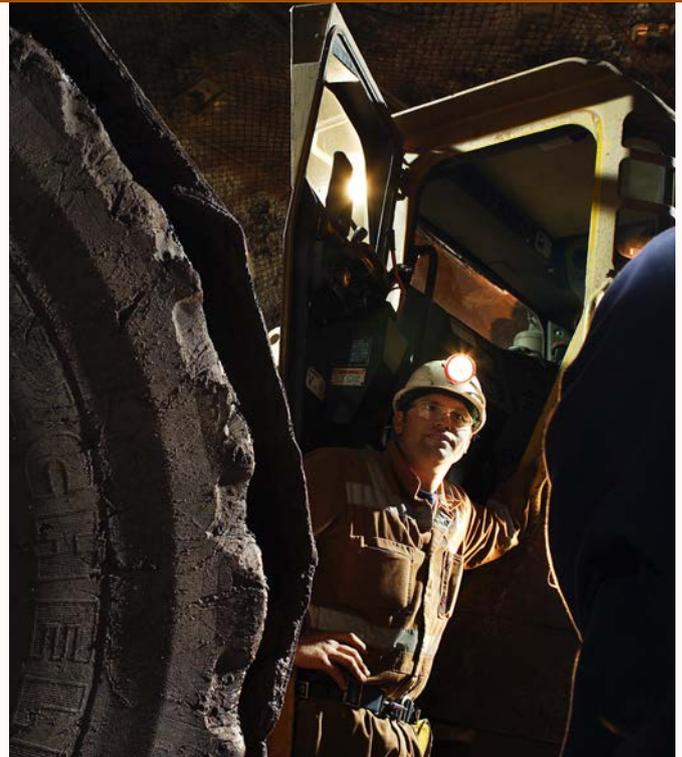

Here in South Australia we're proud to have fostered a strong relationship between government, industry and academia. Over time, these key relationships have cultivated a highly-skilled workforce, developed cutting-edge research, and delivered labour costs which are around 10 per cent below the Australian average. This competitive environment supports highly profitable investments and makes South Australia a place where your business can truly innovate and grow.

Energy and minerals in our state

South Australia boasts an abundance of natural assets – including significant deposits of copper, gold, iron ore, graphite and petroleum – meaning that global demand for resources and expertise is already high. However, we are constantly looking for ways to diversify our offering.

Nationally, we are leading the uptake of renewable energy, while also broadening our energy sector into batteries, thermal storage, hydrogen storage and pumped water storage in disused mine pits.

These efforts allow us to work closely with project developers to meet energy needs now and in the future.

How we can support you

The South Australian Government has a framework for providing assistance to industry through funds including:

- A\$150 million
Regional Growth Fund
- A\$100 million
Economic and Business Growth Fund
- A\$28 million
Research, Commercialisation and Start Up Fund.

In addition to this support, there is a A\$203 million Skilling South Australia fund to create an extra 20,800 apprenticeships and traineeships. This will help grow business, the economy and provide opportunities for young people in South Australia.

The South Australian Landing Pad is a program established to support eligible companies looking to make their first investment in South Australia. Up to A\$80,000 per eligible business case will be available.

For local industry looking to grow, there is the South Australia Export Accelerator grant, an initiative to assist small to medium sized businesses in South Australia to grow in international markets and create jobs.

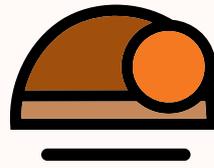

The Department for Trade, Tourism and Investment regularly leads both inbound and outbound trade missions – making sure industry connects globally.

Why South Australia?

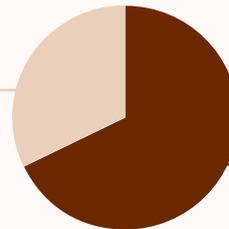

53%

of South Australia's energy production comes from renewable sources which has resulted in more than A\$7 billion in investment.

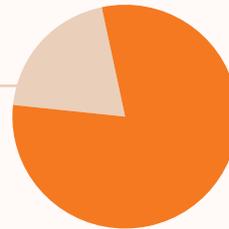

South Australia contains 68 per cent of Australia's copper resources, 80 per cent of Australia's uranium and 28 per cent of its gold.

Rest of Australia

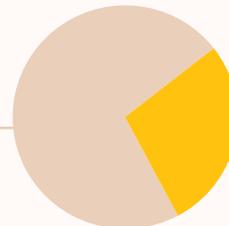

South Australia's copper resources

Rest of Australia

South Australia's uranium resources

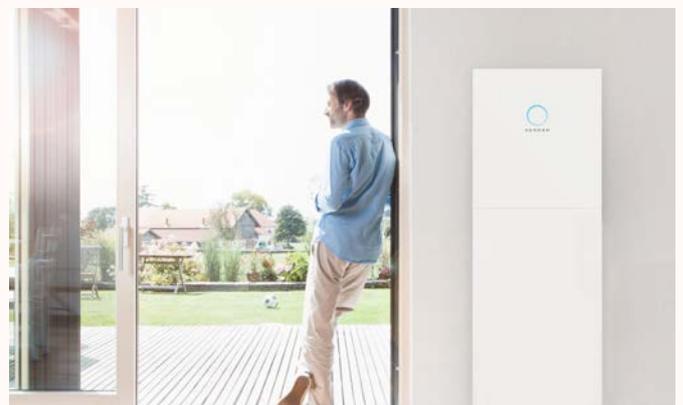

Rest of Australia

South Australia's gold resources

Copper is a key metal for the future, offering major advantages for new and developing technologies. South Australia aims to triple copper production to one million tonnes within two decades.

South Australia is a global leader in home battery development. The South Australian Government's Home Battery Scheme has resulted in investment from leading global solar and home battery developers like Sonnen, which is producing batteries in Adelaide.
